

## Apperceptive agnosia

Model	Patient's drawing	Verbal identification of object
-------	-------------------	---------------------------------

Ability to copy or match visual stimuli

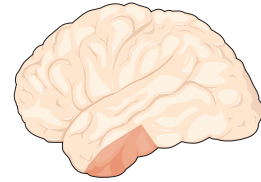

Deficiency of object perception

Clinical interpretation

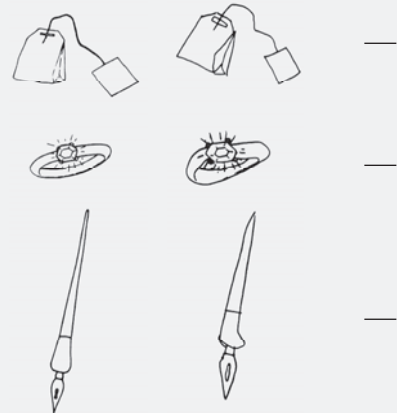

Cannot see object parts as a unified whole

Unable to construct sensory representations of visual stimuli

## Associative agnosia

Model	Patient's drawing	Verbal identification of object
-------	-------------------	---------------------------------

Cannot interpret, understand, or assign meaning to objects

Sensory representation is created normally but cannot be associated with meaning, function, or utility
